THE PINEAPPLE FUND

050 / 2018 / BITCOIN / COMMON

WEALTH INTO WATER.

In late 2017, an anonymous Bitcoin holder calling themselves Pine began the Pineapple Fund. A cryptocurrency fortune became a way to support charitable work. The giving campaign continued into 2018, turning roughly US\$55 million into donations over several months while its founder remained publicly pseudonymous.

Pine's recipients pursued different kinds of change. Alongside clean-water work, the fund supported medical research through MAPS, where an initial gift was followed by a matching campaign. The wider story was about directing Bitcoin wealth toward organisations already working on difficult problems, rather than creating a single new charity.

The Water Project received US\$1 million in Bitcoin in late 2017. Its later impact account credited the gift with 37 new water projects across three programme areas in Kenya and Sierra Leone. The contribution also helped build the organisation's capacity to keep water available after a new point first opened.

In 2018, that support accelerated a regional service hub in western Kenya, including water-quality testing and maintenance support. A subsequent pilot explored phone-based reports of whether water points were working. These details give the scene its second adult: a technician checking the system as another person fills a container.

HISTROVE's First Clear Water scene is a fictional, representative community. The PINE plaque links the water point to the anonymous donor, while the Bitcoin case identifies the source of the gift. The notebook records a later impact snapshot: its 2019 date is separate from the card's 2018 campaign year, not a claim that every pictured outcome happened then.

DETAILS IN THE ART

01 THE PINE PLAQUE

The pineapple and PINE name point to the fund's pseudonymous founder. This invented plaque is a storytelling clue, not a documented dedication at a particular water point.

02 THE WATER TEST KIT

Sample vials and a colour comparison strip represent continuing water-quality checks. The gift supported testing and maintenance as well as new infrastructure.

03 THE BITCOIN CASE

The Bitcoin symbol connects the technician's everyday tools to a cryptocurrency-funded gift. It links an abstract asset to practical work without identifying Pine or a real field team.

04 THE IMPACT NOTEBOOK

37 PROJECTS recalls The Water Project's impact account. The 2019 notation signals the later reporting context; it does not date all 37 completions to 2018 or identify this fictional scene as a documented visit.

SOURCE & ART NOTE

Sources: The Water Project: Pineapple Fund impact; Pine's 2018 retrospective in MAPS Bulletin. The people, village and donor plaque are fictional representative imagery, not known beneficiaries or a documented location. No charity endorsement is implied. WEALTH INTO WATER. is original editorial wording, not a historical quotation.
